

Bartın University Research and Development Policy Document

Aligned with the mission aimed at contributing to science, art, and culture at the local, national, and global levels with a sense of social responsibility, Bartın University aims to:

- Promote a culture of research among faculty members and students,
- Conduct activities to enhance the research and project development skills of researchers, continuously monitor and improve their research performance,
- Identify priority areas considering national/international policies in the fields of science and technology,
- Develop mechanisms to increase research and development activities related to the university's specialization area of "Smart Logistics Systems and Integrated Regional Applications,"
- Ensure an increase in interdisciplinary graduate programs contributing to the university's specialization area and qualified research and development activities,
- Establish a sustainable system to conduct research and generate projects in line with our strategic objectives and goals,
- Strengthen physical, financial, and technical resources to enhance the university's research potential,
- Continuously improve the quality of research and publication outputs and product development efforts by producing knowledge and value and transforming them into social and economic added value,
- Conduct research and development activities in line with the country's development goals by collaborating across sectors to transfer knowledge and technology,
- Support regional development through entrepreneurial and innovative activities,
- Develop mechanisms to support the generation of research and projects based on national and international collaborations,

It adopts the "RESEARCH AND DEVELOPMENT QUALITY POLICY."
