Job Description: The task of this unit is to evaluate risky incidents that students encounter/may encounter in the practical training areas of the Nursing Department at Bartın University Faculty of Health Sciences, to ensure that incident records are kept when incidents occur, to inform the commission to which the unit is affiliated in order to prevent the recurrence of incidents, and to take preventive measures in line with the commission's decisions.

Duties, Powers, and Responsibilities:

- Bartın University Faculty of Health Sciences, Department of Nursing, conducts a risk assessment regarding the hazards that its students may encounter in the areas where their practical training is carried out.
- It conducts risk assessments to determine the causes of potential/occurring risky events and identifies preventive actions to prevent risky events.
- It organizes training for students on the risks they may encounter in laboratories and clinical practice areas, and on activities to prevent these risks.
- The program provides information to both new and continuing students about infectious diseases (Hepatitis-B, HIV, etc.) prevention and vaccination.
- In laboratory/practical areas, risky incidents encountered by students are recorded, and the student who experienced the incident is informed about the process of contacting the relevant unit.
- At the end of each academic term, they report the events that have taken place to the Curriculum Education Committee.
