

Bartın University Research and Development Policy Paper

In line with the mission of Bartın University, which aims to contribute to science, art and culture at local, national and universal levels with the awareness of social responsibility;

- To spread the research culture among academic staff and students,
- To carry out activities to increase the competence of researchers in research and project production, to continuously monitor and improve their research performance,
- To identify priority areas by considering national/international policies in the field of science and technology,
- To develop defined mechanisms that will enable our university to increase research and development activities related to the specialisation area of "Smart Logistics and Integrated Regional Applications",
- To increase the number of interdisciplinary graduate education programmes that will contribute to the specialisation area and qualified research and development activities of our university,
- To create a sustainable system that will enable us to conduct research and produce projects in line with our strategic goals and objectives,
- To strengthen the physical, financial, and technical resources of our university to increase its research potential,
- To ensure that the quality of research and publications and product development activities carried out to produce knowledge and value and to transform these productions into social and economic added value are continuously increased,
- To carry out information and technology transfer and research and development activities in line with the development goals of our country by cooperating between sectors,
- To support regional development through entrepreneurial and innovative activities,
- To develop mechanisms to support research and projects based on national and international cooperation,

adopts "RESEARCH AND DEVELOPMENT QUALITY POLICY".
